

## An Advanced Solution for Long Term Retention of Enterprise Digital Assets

Exponential growth in data, pressure to retain information for longer periods of time, and now e-discovery requirements can only be effectively addressed by implementing a centrally managed secure archive. Atempo Digital Archive is a comprehensive file archiving platform enabling the automatic or end-user triggered movement of fixed content data into long term storage platforms. The information is indexed and easily searchable and accessible until it reaches the end of its life.

### An Answer to Each Archiving Need

#### Addressing Storage Management Challenges

Today the data explosion challenge is driven largely by the surge in rich media content along with an increasing demand for information. This data, some of which is critical to run the business, must be protected with stringent SLA's enforced around recovery. Traditionally, companies have relied on classic backup and recovery technology to address these challenges. However, companies have quickly realized that these traditional technologies cannot keep up with the current and future demands of the business. The most economical way to implement efficient and reliable long term protection of your critical business information is to place it in a centrally managed secure archive. Doing so will ensure that your most valuable data will be organized and easily accessible while freeing up expensive disk space, consequently reducing storage costs and significantly reducing your backup window for data that is infrequently accessed. Atempo Digital Archive is the natural solution to enable IT organizations to address their storage management challenges.

#### Solution for the Long Term Retention of your Digital Assets

Digital information is now the lifeblood of the enterprise. It represents the wealth of your company and in some cases holds historical value that will serve future generations. Atempo Digital Archive allows you to retrieve information based on relevant keywords in a timely fashion thanks to its integrated full content indexing and search capability and its advanced metadata indexing. Refreshing mechanisms are also in place to make sure that the storage media is still readable and that the information can be accessed in years down the road.

#### Making E-discovery an Easy Task

In an era of countless litigation issues, it is a requirement for enterprises to have relevant information at their fingertips if litigation arises. Atempo Digital Archive allows you to retrieve information based on relevant keywords in a timely fashion thanks to its integrated full content indexing and search capability and its advanced metadata indexing. Open the search and retrieval interface, enter the keywords related to the documents you are looking for and launch the query. Key documents will be retrieved in minutes.

## Key Features and Benefits

Atempo Digital Archive is a software solution dedicated to the archival of digital information stored on any file server. Built on an open architecture, it seamlessly integrates into your storage infrastructure. Driven by internal company policy, the archiving of data can be done automatically according to policies setup by the administrator. These policies enable administrators to easily and automatically enforce the movement of fixed content data from expensive disk storage to less expensive long term media (disk or tape). Additionally, authorized users can create their own archiving folders and send the data to the archive as demanded by simply dragging and dropping the data into the archive folder.

### Automatic Archive

Atempo Digital Archive offers a built-in HSM functionality that enables the automatic archival of data based on selected criteria. When the file has been moved to its long term storage location, a stub remains on the primary storage to enable easy retrieval and access to this data.

### End-User Initiated Archive

Integrated into the end-user desktop, the client interface offers drag and drop capabilities enabling users to archive fixed content data by simply dragging and dropping it into the archive folder of their choice.

### Full Content Indexing & Search

Atempo Digital Archive not only indexes the information based on its metadata but it also offers a full content indexing and search capability. Whether you need to consult an archive file for reference or need to bring back archived data for e-discovery purposes, the integration of a full content index engine makes the retrieval of this information a breeze.

### Flexible Archive Organization

Data can be archived into personal or shared folders. The administrator assigns access rights depending on the company policies and can easily grant or prevent access to a specific archive.

### Central Administration

Atempo Digital Archive is administered and configured from a central location. It can archive data from any file server and can connect to countless storage devices on the network. The administration console enables the administrator to setup archiving rules and policies and assigns rights to the end users.

### Scalability & Performance

Built on a robust and proven platform, Atempo Digital Archive offers tremendous scalability. Thousands of users can archive data on the fly and TBs of archived information can be managed for long periods of time. In order to ensure optimum performance, the flow of information is handled continuously. Finally, single instance storage capability is built into the product which helps save storage space.

### Operating Systems

#### End-user Interface:

- ⊙ Microsoft® Windows®
- ⊙ Mac OS®
- ⊙ Java® for UNIX and Linux® Platforms

#### Atempo Digital Archive Agent:

- ⊙ Microsoft® Windows® (with stubbing capabilities)
- ⊙ Mac OS® (with stubbing capabilities)
- ⊙ Linux®
- ⊙ UNIX
- ⊙ NAS (with stubbing capabilities)

#### Atempo Digital Archive Server:

- ⊙ Microsoft® Windows®
- ⊙ Mac OS®
- ⊙ Linux®
- ⊙ UNIX

#### Storage:

- ⊙ Disk
- ⊙ Tape
- ⊙ WORM
- ⊙ HDS HCAP
- ⊙ EMC® Centera®

Please refer to the Atempo Compatibility Guide for the current list of supported systems.

### About Atempo

Atempo develops and markets award-winning software for the full range of data protection, recovery management and archiving needs. Today Atempo serves thousands of customers around the world with comprehensive, cross-platform solutions and a sales and support network of over 100 resellers and partners. The company is headquartered in Palo Alto, California with operations in Europe and Asia.
